

A collapsible cup model

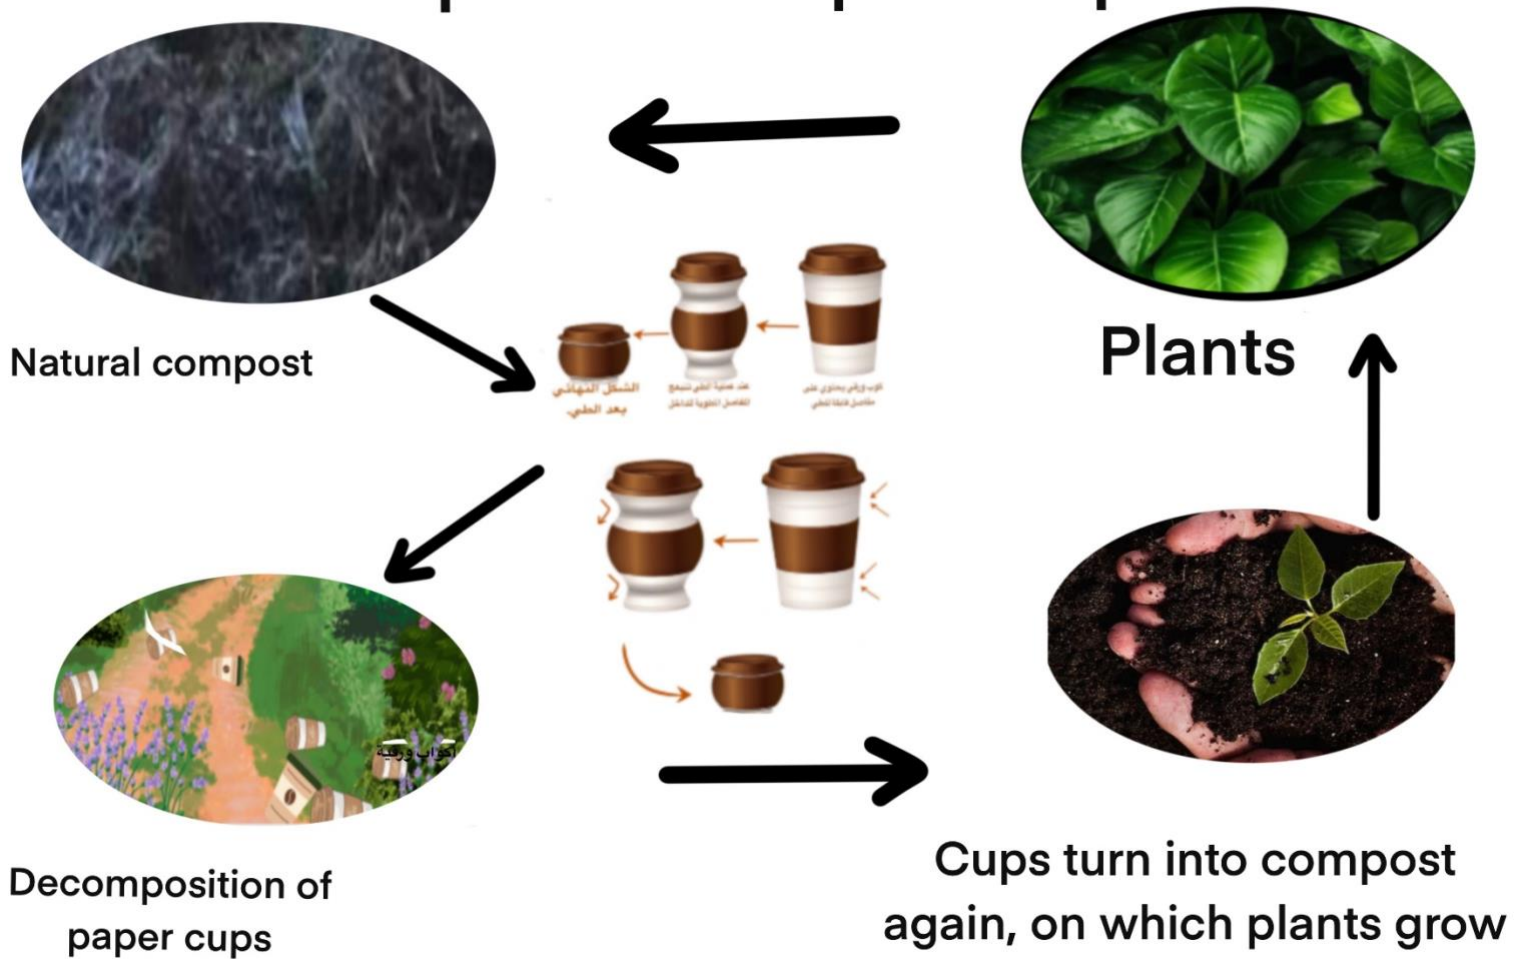

Easy to carry and store: A collapsible cup can be easily placed in a pocket or bag, making it ideal for use in travel, camping, and other outdoor activities

Space saving: A collapsible cup takes up very little space when not in use, which helps to save space in cabinets and shelves

Environmentally friendly: A collapsible cup can be used instead of disposable plastic cups, which reduces waste and pollution

Versatile: A collapsible cup can be used for drinking, snacks, and even as a small bowl

Collapsible compost cups

:My sustainability project is summarized in two main points"

The industrial aspect of the cups: They are made from natural .fertilizer, which is environmentally friendly and healthy

The design aspect: The shape is designed to be practical and attractive, allowing consumers to store it in tight spaces and carry it .in small bags, taking up much less space than regular cups

The design alone represents sustainability, as the cups can be made to be reusable. They can be crafted from materials that allow for repeated use, thus the disposal rate would be lower than the usual rate, which may contribute to preserving the environment by reducing ".the waste of disposable cups
